

MATTHEW DELTANO

matt deltano@gmail.com | linkedin.com/in/matthew-deltano/

EDUCATION

Bachelor of Science, Computer Science | May 2025

Florida Polytechnic University, Lakeland, FL | Concentration: Software Engineering

GPA: 3.9, Summa Cum Laude • Fulbright Canada Killam Fellow

EXPERIENCE

Software Engineering Consultant / Mobile App Project Manager | Aug 2024 – Present

Visitry LLC – Tampa, FL

- Designed and implemented automated scheduling and conflict-resolution logic at the core of a healthcare platform serving 700+ patients and clinicians with 100+ concurrent users
- Built and maintained backend REST APIs and MongoDB data models on AWS, diagnosing issues that spanned API behavior, database state, and core business logic
- Led a five-person technical team as the primary integration point for feature development, owning delivery on a typical one-week request-to-release cadence
- Refactored and stabilized legacy components and supported major framework upgrades (React Native 0.68 → 0.72, Swift 5 → 6) to reduce technical debt and preserve forward compatibility
- Optimized data queries to eliminate unnecessary network and database calls, and monitored production behavior with AWS CloudWatch logs to diagnose and resolve errors

Research Assistant (Computational Mathematics / Algorithms) | Jul 2023 – Dec 2023

Florida Polytechnic University – Lakeland, FL

- Designed a custom computational algorithm from scratch in Mathematica to analyze zero-divisor graphs of 1,000+ nodes, achieving an approximately 100x throughput improvement by combining targeted pruning logic with early-exit brute-force checks
- Reasoned explicitly about performance tradeoffs (speed vs. memory, generality vs. specialization); core implementation published in a peer-reviewed journal (Graphs and Combinatorics)

PERSONAL PROJECTS

Soccer Player Statistics ML Model

Python, TensorFlow, NumPy, Pandas, Seaborn | github.com/mdeltano/EECS3401_FinalProject

- Built a supervised machine learning pipeline handling data ingestion, cleaning, normalization, and feature preparation across a dataset of 2,688 rows and 124 features
- Conducted exploratory data analysis and feature correlation analysis with Seaborn to identify statistically meaningful predictors and reduce noise
- Implemented and compared Ridge, Lasso, and baseline linear regression models, achieving approximately 0.80 R^2 on held-out data

KNOWLEDGE, SKILLS, & ABILITIES

Languages: Python, JavaScript (Node.js), Java, SQL, Rust, C/C++, Mathematica

AI/ML & Data: TensorFlow, NumPy, Pandas, Seaborn, supervised model development, feature engineering, data pipelines

Backend & Cloud: REST APIs, MongoDB, SQLite, AWS (CloudWatch), event-driven architecture

Engineering Practices: performance optimization and bottleneck diagnosis, system design and tradeoff analysis, concurrency, Git/GitHub, CI/CD, Unix/Linux
