

# MATTHEW DELTANO

San Antonio, TX | [mattdeltano@gmail.com](mailto:mattdeltano@gmail.com) | [linkedin.com/in/matthew-deltano](https://www.linkedin.com/in/matthew-deltano) | [github.com/mdeltano](https://github.com/mdeltano)

## EDUCATION

---

**B.S. Computer Science, Software Engineering Concentration** | May 2025  
*Florida Polytechnic University, Lakeland, FL* | GPA 3.9, Summa Cum Laude

## EXPERIENCE

---

**Software Engineering Consultant / Mobile App Project Manager** | Aug 2024 - Present  
*Visitry LLC, Tampa, FL (Remote)*

- Selected as the sole capstone member to continue post-graduation, developing a cross-platform mobile healthcare scheduling app now live on the Apple App Store and Google Play.
- Built full-stack with React Native, Node.js, MongoDB, and AWS, and led a five-person team as the integration point for feature delivery and production readiness.
- Designed automated scheduling and conflict-resolution logic serving 700+ users and 100+ concurrent sessions, improving booking reliability.
- Drove major framework upgrades (React Native 0.68 to 0.72, Swift 5 to 6), optimized data queries, and used AWS CloudWatch to diagnose production issues.
- Owned feature delivery from request through release, typically on a one-week cadence from client request to deployed functionality.
- Partnered with non-technical stakeholders to translate evolving business needs in an on-demand healthcare model into technical solutions, with regular demos and progress updates.

**Research Assistant, Computational Mathematics / Algorithms** | Jul - Dec 2023  
*Florida Polytechnic University, Lakeland, FL*

- Engineered a custom graph-analysis algorithm in Mathematica with ~100x performance gain via targeted pruning and early-exit brute-force checks, scaling to graphs with 1,000+ nodes.
- Contributed the core implementation to a peer-reviewed publication (Graphs and Combinatorics), adopted for ongoing departmental research.
- Authored and delivered a technical presentation on methodology, tradeoffs, and performance gains to an academic audience of 5,000+ students and faculty.

**Server Administrator / Java Developer** | Sep 2020 - Feb 2022  
*Elbowbump Kid Nonprofit Organization, Remote*

- Configured and administered a Spigot-based Minecraft server for 20+ concurrent users, managing access control, permissions, backups, recovery, and live moderation.

## PERSONAL PROJECTS

---

**Soccer Player Statistics ML Model** | Python, TensorFlow, Pandas, Seaborn

- Built a supervised ML pipeline predicting goal totals from a 2,688-row, 124-feature dataset (~0.80 R-squared), comparing Ridge, Lasso, and baseline linear regression.
- Ran EDA and feature-correlation analysis in Seaborn to select predictors, and published the full pipeline to GitHub with end-to-end ownership of processing, modeling, and evaluation.

**Minecraft Server Plugin Developer** | Java, Paper (Spigot), GitHub

- Developed event-driven Java plugins for a 100+ user server, including a full in-game economy with dynamic pricing, plus data persistence and event-handling tuning to keep TPS stable.
- Enhanced and stabilized an existing nation-warfare system, integrating newer economy and territory mechanics while maintaining compatibility across server versions.

## AWARDS & HONORS

---

- Killam Fellowship Recipient (Fulbright Canada), Spring 2024, for academic excellence and leadership in a competitive international exchange program.

## SKILLS

---

**Languages:** Java, JavaScript (Node.js), Python, Rust, C/C++, C#, SQL, Mathematica

**Frameworks & Tools:** React Native, Node.js, TensorFlow, MongoDB, SQLite, AWS, Paper/Spigot, Git/GitHub, CI/CD, Unix/Linux

**Engineering:** Full-stack development, REST APIs, concurrency and multi-threading, performance optimization, refactoring legacy systems, event-driven architecture, Agile workflows
